

global broadband futures

Monday, November 13, 2017

Kirribilli Club, North Sydney, NSW, Australia

Global Broadband Futures is an important new one-day event in Sydney with a difference: it brings together the best carrier technologists and executives from around the world to meet with their Antipodean counterparts.

Access network executives from major American, European and Asian operators will share their perspectives on the challenges and opportunities they face in rolling out next generation broadband networks.

Australian telecom firms such as NBN and other competitors in the fixed access space will also do the same.

Technology vendors are also being invited to share both their real world learnings and what's on the bench in the laboratories and standards bodies.

Our event mission is based broadly on the international example provided by that of Broadband World Forum where leading subject experts can gather in a respectful forum for knowledge sharing.

This event is for you, if you are:

- retailing or wholesaling broadband services
- involved in public policy making or market analysis
- a network operator, manager or supplier

THE DAY'S AGENDA:
